\$10,000 for my Community

If I were given \$10,000 to improve the neighborhood I go to school in I would add facilities to my school. In my school, we don't have much. A small gym, small closets in the classrooms and that's about it. Students have no personal spaces to go to take a break or get work done in places other than a classroom. This causes a parade of students running to the bathroom and hiding in different places in the school to avoid being in class. Teachers have to send students who need breaks from class to roam the halls, which again causes a flood of students there during classes. I have always believed that if there was a library like room for students to go to when they needed a bit of time, it would make the school environment more efficient. With the 10,000 I would take a room and add wall to wall bookshelves and fill the room with bean bag chairs and desks. There, students would be able to take time that they need away from the classroom (with a time restriction) to complete any tasks or recollect themselves.
